ACKNOWLEDGEMENT

A successful man is one who can lay a firm foundation with the bricks other have thrown at him. — *David Brinkley*

Such a successful personality is our beloved founder Chairman,

Thiru. MJF. Ln. LEO MUTHU. At first, we express our sincere gratitude to our beloved Chairman through prayers, who in the form of a guiding star has spread his wings of external support with immortal blessings.

We express our gratitude to our CEO **Dr. J. SAI PRAKASH LEO MUTHU** for creating an inspiring environment that encourages learning and innovation. His guidance and vision have significantly impacted the completion of this project.

We express our sincere thanks to our beloved Principal, **Dr. J. RAJA** for his constant encouragement and for providing the resources necessary to bring this project to fruition.

We are indebted to our Head of the Department, **Dr. B. LATHA** for the insightful suggestions, mentorship, and continuous motivation, which have guided us at every stage.

We thank our Innovative Design Lab-I Co-ordinator, **MRS.K. SUSITRA**, who has been instrumental in coordinating efforts and ensuring smooth progress.

We express our gratitude and sincere thanks to our Guide,

Dr. M. KANTHIMATHI for their expertise, patience, and valuable insights. Their constructive feedback, encouragement, and availability for guidance have been crucial in overcoming challenges and achieving the objectives of this project.

We thank all the teaching and Non-teaching staff members of the Department of Computer Science and Engineering and all others who contributed directly or indirectly for the successful completion of the project.

ABSTRACT

TourSafe – Smart Real-Time Tourist Safety Monitoring & Emergency Response System

TourSafe is an intelligent tourist safety solution that integrates Artificial Intelligence (AI), Geo-Fencing, and Blockchain-based Digital Identity to enhance security and emergency response in tourism ecosystems. Tourist safety remains a major concern, especially in remote and high-risk regions, due to limited monitoring, delayed response, and unreliable identity verification. TourSafe addresses these challenges through a smart, technology-driven approach. The system consists of a mobile application for tourists and a real-time monitoring dashboard for authorities. Tourists are issued a secure blockchain-based digital ID through verified KYC or passport authentication, ensuring tamper-proof and trustworthy identity management. The mobile application enables live location tracking, geo-fencing alerts for restricted zones, and emergency features such as one-touch SOS, shake-to-alert, and AI-based anomaly detection for abnormal movement or inactivity. On the authority side, a centralized dashboard provides real-time visualization of tourist locations, predictive risk analytics, and automated e-FIR generation for missing or distressed tourists. Built using the MERN stack, React Native, blockchain platforms, and TensorFlow-based AI models, TourSafe aims to reduce emergency response time, improve coordination between stakeholders, and enhance tourist confidence. The project supports UN SDGs 8, 11, and 16, promoting safe, sustainable, and technology-enabled tourism.

CHAPTER 1

EXECUTIVE SUMMARY

1.1 Overview of the Business Idea

Tour Safe is a safety-centric travel platform that replaces travel anxiety with proactive protection by connecting solo travelers and families to a marketplace of “Safe-Certified” vendors. Unlike reactive insurance that pays after a mishap, our Unique Selling Proposition is real-time prevention, utilizing a “digital guardian” app with live SOS support and pre-vetted local guides to stop incidents before they happen. By merging human trust with GPS technology, we ensure every journey is secure, verified, and stress-free.

1.2 Vision & Mission

- **Vision:** To become the global standard for travel security by empowering every traveler with a trusted, vetted ecosystem. We aim to eliminate the fear of the unknown through proactive protection, ensuring that safety is an accessible part of every journey
- **Mission:** To empower travelers with a secure, trusted ecosystem and real-time assistance, ensuring every journey is safe, confident, and worry-free through proactive protection and verified local support.

1.3 Key Highlights

- **Target Market:** Solo female travelers, adventure seekers, families, and corporate travelers needing trusted safety support.
- **Unique Selling Proposition (USP):** Proactive safety with safe-certified services and 24/7 assistance, acting as a digital guardian to prevent risks.

CHAPTER 2

THE PROBLEM AND OPPORTUNITY

2.1 Problem Statement

Modern travelers face high levels of anxiety due to unverified local operators, safety scams, and the lack of immediate support during emergencies in unfamiliar locations. Traditional travel insurance is reactive, only providing financial compensation after a mishap occurs rather than preventing it. This leaves a critical gap for solo travelers and families who need proactive, real-time security and a trusted network to ensure their physical safety before a crisis arises.

2.2 Market Opportunity

The global solo travel market is projected to hit \$1.07 trillion by 2030, with solo women now making up 84% of all independent travelers. Despite this growth, 70% of women cite physical safety as their primary barrier to travel, creating a massive “trust gap” in the industry. As the traveler security market surges at a 21.3% CAGR, Tour Safe is positioned to capture this demand by converting safety concerns into a premium, tech-enabled service.

2.3 Problem Interviews and Survey Results

Insights from solo traveler communities and adventure groups are showed:

- 70% of women avoid solo travel due to safety concerns.
- 96% would travel to risky areas with safe-certified support.
- 25% of solo travelers felt unsafe last year.
- 29% faced scams or theft while traveling.
- 42% find travel insurance ineffective for daily safety.

CHAPTER 3

JUSTIFICATION FOR SDG GOAL

3.1 State the Chosen SDG and Target:

Primary: Goal 11 (Sustainable Cities & Communities)

- Target 11.7:

We provide universal access to safe, inclusive, and accessible public spaces by auditing city infrastructure and local zones for travelers.

Secondary: Goal 16 (Peace, Justice & Strong Institutions)

- Target 16.1:

We significantly reduce violence and harassment through our “Digital Guardian” technology and 24/7 real-time emergency response.

Tertiary: Goal 8 (Decent Work & Economic Growth) –

- Target 8.9:

We promote sustainable tourism that creates jobs by directing global travelers toward vetted, ethical, and “Safe-Certified” local businesses.

3.2 Alignment with the SDG Target :

We audit urban routes to ensure women navigate public spaces safely (11.7), use live GPS and SOS alerts to provide immediate physical intervention against violence (16.1), and promote sustainable tourism by directing revenue to vetted, “Safe-Certified” local businesses (8.9).

3.3 Justification and Impact :

Tour Safe fills the gap between insurance and real-world protection by auditing public spaces and providing proactive emergency response to ensure universal traveler security. This creates a measurable social impact by empowering vulnerable groups, reducing crime in tourist hubs, and driving sustainable revenue to ethical local businesses.

CHAPTER 4

MARKET RESEARCH AND STRATEGY

4.1 Market Size Estimation

The travel and tourism industry is one of the largest global sectors, with a market value of approximately USD 7.7 trillion. In India, tourism contributes around USD 280 billion through domestic and international travel. A significant portion of this tourism involves travel to remote, adventure-based, and high-risk regions where safety challenges are prominent.

TourSafe focuses on this high-risk tourism segment. By conservatively targeting 5% of adventure, remote, and high-risk tourism activities in India, the Serviceable Obtainable Market (SOM) is estimated at approximately USD 1.2 billion. This indicates strong potential for a technology-driven tourist safety solution.

4.2 Target Audience and Customer Persona

- **Primary Target Audience**
 - Domestic tourists travelling to remote or high-risk locations
 - International tourists visiting unfamiliar regions
 - Solo travellers, women travellers, and adventure enthusiasts
- **Customer Persona:**
 - **Name:** Sarah, 28, Frequent Traveller
 - **Pain Points:** Feels concerned about personal safety, delayed emergency response, and lack of reliable identity verification while travelling.
 - **Needs:** A simple, reliable mobile app that ensures real-time safety monitoring, quick emergency assistance, and secure digital identity verification during travel.

4.3 Industry Trends and Insights

- The tourism industry is increasingly adopting digital safety solutions. Governments are investing in smart tourism technologies to enhance tourist protection.
- **Key trends include:** • Use of AI for predictive safety monitoring Real-time tracking and geo-fencing • Secure digital identity systems.
- TourSafe aligns with these trends by integrating AI, geo-fencing, and blockchain technologies.

4.4 Competition Analysis

- Existing solutions such as SOS apps and GPS trackers provide limited safety support and are mostly reactive.
- Limitations of current solutions:
 - No predictive risk detection
 - Limited authority integration
 - Lack of secure identity verification
- TourSafe overcomes these limitations through proactive monitoring, authority dashboards, and blockchain-based digital IDs.

4.5 Unique Selling Proposition (USP)

- The Unique Selling Proposition (USP) of TourSafe lies in its proactive, technology-driven, and integrated approach to tourist safety.
- The platform seamlessly combines AI-based anomaly detection, real-time geo-fencing alerts, blockchain-secured digital identity, and direct authority integration into a single system with an intuitive user interface.
- This unified approach enables faster emergency response, enhanced trust, and safer travel experiences, even for users with no technical or security expertise.

CHAPTER 5

SOLUTION & PRODUCT DEVELOPMENT

5.1 Proposed Solution

We have developed a smart, real-time tourist safety monitoring and emergency response system designed for tourists travelling to remote and high-risk areas. The solution consists of a mobile application for tourists and an authority-side dashboard for monitoring and emergency coordination.

The platform offers the following key features:

- **Blockchain-Based Digital ID:**
Provides tourists with a secure, tamper-proof digital identity verified using Aadhaar or passport, valid for the trip duration.
- **Real-Time Monitoring:**
Continuously tracks tourist movement using GPS to ensure location visibility during travel.
- **AI-Based Risk Detection:**
Uses AI-driven anomaly detection to identify unusual movement, inactivity, or route deviation.

5.2 Product Features and Benefits

- **Real-Time GPS Tracking:**
Allows continuous monitoring of tourist location for quick emergency response.
- **Geo-Fencing Alerts:**
Notifies tourists and authorities when restricted or high-risk zones are entered.
- **SOS Emergency Features:**
Enables panic alerts through a button, shake-to-alert, or predefined code words for discreet emergencies.

5.3 Value Proposition Canvas

- **Customer Jobs:**
Tourists need to travel safely in unfamiliar regions and receive immediate assistance during emergencies.
- **Pains:**
Delayed emergency response, lack of real-time monitoring, and difficulty in identity verification.
- **Gains:**
Proactive safety monitoring, faster assistance, and increased trust while travelling.

5.4 Minimum Viable Product (MVP)

The MVP of TourSafe consists of a mobile-based application with the following core features:

- User registration and digital ID generation
- Live location tracking.
- Basic AI-based alert detection,
- SOS emergency activation

5.5 MVP Validation and Feedback

We tested the MVP through surveys and interviews and received the following feedback:

- 80% of tourists agreed that existing safety solutions are insufficient
- 90% of tour operators supported authority-connected safety monitoring
- Users highlighted the importance of predictive alerts and secure digital identity.

CHAPTER 6

BUSINESS MODEL AND STRATEGY

6.1 Business Model Overview

TourSafe adopts a hybrid business model combining Business-to-Consumer (B2C) and Business-to-Government (B2G) approaches:

- **B2C Model:**

Tourists access the platform through a mobile application offering essential safety features during travel.

- **B2G Model:**

Tourism authorities and government agencies utilize a subscription-based monitoring dashboard for tourist safety and emergency response.

6.2 Revenue Model

Revenue will primarily come from subscriptions, with additional revenue generated through government partnerships and platform licensing for authority-level access.

6.3 Sales Plan and Go to Market Strategy

- **Sales Channels:** Digital marketing, collaborations with tourism departments, travel agencies, and tour operators.
- **Customer Acquisition Strategy:** Focus on app-store presence, awareness campaigns, institutional partnerships, and onboarding through tourism agencies.

6.4 Marketing and Customer Acquisition Strategy

- **Branding:** Position TourSafe as a trusted, government-aligned tourist safety and emergency response platform.
- **Partnerships:** Collaborate with accounting firms to reach more SMEs.
- **Retention:** Offer customer support and regular feature updates to keep users engaged.

CHAPTER 7

FINANCIAL PLAN & PROJECTIONS

7.1 Financial Overview

- **Startup Costs:** \$250,000 allocated for advanced AI model training, Blockchain node deployment, and initial government pilot programs.
- **Revenue Projections:** \$800,000 in Year 1 through state-level contracts, scaling to \$12M by Year 5 as we expand to international tourism boards.

7.2 Forecasted Profit & Loss (P&L)

- **Year 1:** Revenue: \$800,000; Net Profit: \$150,000
- **Year 2:** Revenue: \$2.5M; Net Profit: \$700,000

7.3 Financial Projections

Toursafe expects to reach a break-even point by the end of Year 1, given the high-value nature of government safety contracts. Significant profitability is forecasted to begin in Year 2 as recurring licensing fees for the Authority Dashboard accumulate.

7.4 Unit Economics

- **Customer Acquisition Cost (CAC):** \$5,000
- **Customer Lifetime Value (CLV):** \$150,000
- **Payback Period:** 10 months

7.5 Funding Plan and Capital Requirements

We are seeking \$1,000,000 in seed funding to cover development, marketing, and operational costs for the first 18 months. Funds will be allocated as follows:

- **50%** for platform development
- **30%** for marketing
- **20%** for operational expenses

CHAPTER 8

TEAM AND EXECUTION

8.1 Team Composition and Roles

- **CTO (Chief Technical Officer): SNEHA C** : Focuses on the development and integration of the core technologies.
- **CSO (Chief Strategy Officer): MADHUMITHA S**: Focuses on market entry, B2G sales cycles, regulatory compliance, and overall business growth strategy
- **CPO(Chief Product Officer): VISHAL L**: Focuses on the user experience and ensuring the product aligns perfectly with real world Emergency Medical Services and Tourism Authority needs.

8.2 Milestones & Execution Roadmap

- Q1: Problem and Opportunity – Mapping high-risk tourism zones in India and validating safety gaps with local authorities. Validate the opportunity by quantifying the impact of the 30-40 minute response delay on tourist confidence and state revenue.
- Q2: Market Research & Strategy, Solution & Product Development – Build the Toursafe MVP, integrating the AI Anomaly Detection engine for behaviour monitoring and the Blockchain-Based Digital ID system for secure verification. Refine the E-FIR generation logic through testing.
- Q3: Financial Plan & Projections - Finalize the B2G pricing model, focusing on multi-year service agreements for state-wide implementation.

8.3 Risk Analysis and Mitigation Strategies

- **Risk**: Data privacy concerns regarding Blockchain-based IDs.
 - **Mitigation**: Implementing a Privacy-First Architecture with end-to-end encryption and ensuring all data stays within sovereign borders.

CHAPTER 9

CONCLUSION & NEXT STEPS

9.1 Summary of Key Points

Toursafe addresses the critical 30-minute rescue delay in remote areas through an integrated platform of Predictive AI, Blockchain IDs, and Geo-Fencing. Our solution offers a scalable framework to enhance tourist confidence and align with SDG 16.

9.2 Next steps

- Secure \$1,000,000 seed funding to scale technical development.
- Expand the development team with AI/ML and Blockchain specialists.
- Execute our go-to-market strategy via pilot programs in major eco-zones.

Reflecting on the Innovative Design Lab – I

- This IDL - I project provided a valuable opportunity to apply classroom learning to a real-world business challenge regarding tourist safety. This IDL - I project provided a valuable opportunity to apply classroom learning to a real-world business challenge regarding tourist safety.
- The Wadhwani modules provided a strong framework for understanding the entrepreneurial process, from problem identification to business modeling.
- We learned the critical importance of customer validation and iterative development through the creation of our initial MVP
- The IDL - I experience enhanced our professional skills in market research, financial planning, and cross-functional team collaboration.
- We developed a deeper understanding of how to align a startup idea with broader social goals and institutional needs.

APPENDICES

Category	Data Point / Calculation	Description
System Latency	70% Reduction	Target reduction in emergency response time compared to the current 30-40 minute baseline.
Financial Formula	$CLV = (ARPU * Duration) - Servicing\ Cost$	Used to calculate the Customer Lifetime Value of \$150,000 for government contracts.
Blockchain Security	End-to-End Encryption (E2EE)	Implementation of tamper-proof records for the Trip-Based Digital ID.
Revenue Calculation	$Year\ 1\ Revenue = (State\ Licenses * 2) + Pilot\ Fees$	Based on securing two major state-level contracts and initial pilot implementation fees.
AI Parameters	95% Accuracy Threshold	The confidence interval required for the AI Anomaly Detection system to trigger an automated SOS alert.
Market Impact	15% Arrival Boost	Projected increase in tourist arrivals following the successful implementation of the safety framework.

The incident log #MP-2024-88A has been updated, and the responding ground unit (Mumbai Police) is fully apprised of the new intel, which confirms the subject has reached a secure, public waystation. Immediate Action: Coordinator should verify the subject's continued stability at the safe location and determine the appropriate resource deployment for either securing the scene or initiating a partial stand-down for the ground unit.

APPENDIX II

KEY PERFORMANCE INDICATORS (KPI SECTION)

Include the following KPIs that highlight achievements and external recognitions associated with your project:

Key Performance Indicators

1. Research Professional Practice

- 1.1. Paper Publications (Title, Journal/Conference, Year)
- 1.2. Patent Publications (Title, Patent Number, Year)
- 1.3. 1.3. Project Proposals submitted (Govt/ NGO/ Others)
- 1.4. Community Service Projects (Title, Impact, Year)

2. Competition / Funding

- 2.1. Hackathon Participation (Event Name, Year, Achievements)
- 2.2. Project-Based Competitions (Event Name, Year, Rank/Achievements)
- 2.3. Academic International Level Participation (Event Name, Country, Year, Achievements)
- 2.4. Grant / Funding Received
- 2.5. Shortlisted for 2nd Round of Project Expo (Year)
- 2.6. Real-Time Validation of Project Idea (Description, Year)
- 2.7. Project Progression (Ideathon 3.0 to Innovathon 3.0)
- 2.8. Ideathon and Innovation Challenges (Event Name, Year, Rank/Achievements)

3. Startup / Entrepreneurship

- 3.1. Startup Registered
- 3.2. Under any Incubation Support
- 3.3. Project Proposals and Grants (Title, Funding Agency, Year)
- 3.4. iDEX Proposal Submission

APPENDIX III

JUSTIFICATION FOR POSITIVE (Productable, Opportunities, Sustainable, Informative, Technology, Innovative, Viable and Ethical)

S.No	PARAMETERS	JUSTIFICATION	RATING (1 to 5)
1.	Productable	MVP is technically ready for Implementation.	5
2.	Opportunities	High B2G potential through safety contracts.	5
3.	Sustainable	Recurring licensing model ensures long-term economic stability.	4
4.	Informative	Dashboard provides live monitoring and heatmaps for authorities.	5
5.	Technology	Deep-tech stack including Edge Computing and Blockchain ID's.	5
6.	Innovative	Unique “Voice assisted Alert” and AI driven anomaly detection.	5
7.	Viable	Profitable by Year 2 with strong CLV-to-CAC unit economies.	4
8.	Ethical	Privacy-First Architecture secures user data with end-to-end encryption.	5

Imagine the Future and Make it happen!

Together let's build a better world where there is **NO POVERTY** and **ZERO HUNGER**.
We have **GOOD HEALTH AND WELL BEING**, **QUALITY EDUCATION** and full **GENDER EQUALITY** everywhere.
There is **CLEAN WATER AND SANITATION** for everyone. **AFFORDABLE AND CLEAN ENERGY**
which will help to create **DECENT WORK AND ECONOMIC GROWTH**. Our prosperity shall be fuelled
by investments in **INDUSTRY, INNOVATION AND INFRASTRUCTURE** that will help us to
REDUCE INEQUALITIES by all means. We will live in **SUSTAINABLE CITIES AND COMMUNITIES**.
RESPONSIBLE CONSUMPTION AND PRODUCTION will help in healing our planet.
CLIMATE ACTION will reduce global warming and we will have abundant,
flourishing **LIFE BELOW WATER**, rich and diverse **LIFE ON LAND**.
We will enjoy **PEACE AND JUSTICE** through **STRONG INSTITUTIONS**
and will build long term **PARTNERSHIPS FOR THE GOALS**.

For the goals to be reached,
everyone needs to do their part:
governments, the private sector,
civil society and **People like you.**

Together we can...

Sairam Leo Mathur
