

TourSafe – Smart Real-Time Tourist Safety Monitoring & Emergency Response System using AI, Geo-Fencing, and Blockchain-based Digital ID

TourSafe is an intelligent, technology-driven solution designed to ensure tourist safety through the integration of Artificial Intelligence (AI), Geo-Fencing, and Blockchain-based Digital Identity Management. As tourism continues to be a major contributor to economic growth, safety concerns—particularly in remote and high-risk regions—remain a persistent challenge due to inadequate monitoring, delayed emergency response, and unreliable identity verification.

The proposed system bridges this gap through a mobile application for tourists and a real-time monitoring dashboard for authorities. Tourists receive a unique blockchain-based digital ID generated through verified KYC or passport credentials, ensuring secure and tamper-proof identity management. The application provides live location tracking, geo-tagging, and restricted zone alerts, while also featuring SOS emergency functionalities such as one-touch alerts, “shake-to-alert,” and AI-based anomaly detection for abnormal movement or inactivity.

On the authority side, the dashboard enables real-time visualization of tourist clusters, predictive risk analytics, and automated e-FIR generation for missing or distressed tourists. The system leverages a modern MERN stack with Node.js, MongoDB, React Native, Hyperledger/Ethereum blockchain, and TensorFlow-based AI models for predictive safety analysis.

TourSafe aims to reduce emergency response time by up to 70%, improve trust in tourism ecosystems, and strengthen coordination between tourists, authorities, and emergency services. The project aligns with UN Sustainable Development Goals (SDG 11 – Sustainable Cities & Communities, SDG 16 – Peace, Justice & Strong Institutions, and SDG 8 – Decent Work & Economic Growth) by promoting safe, responsible, and technology-enabled tourism.

By merging AI intelligence, geo-awareness, and blockchain-secured trust, TourSafe redefines how tourist safety is managed—making travel not just smarter, but truly safer.

Hey guyss...let's start working on the app..
Let's first brainstorm enna language
would be most compatible for this type
of an app...and first modle/ prototype
ku enna tech stack or application use
panna porom(like figma, Flutter)...and
backend ku enna use panna porom(React
etc..etc...)

Ellamey related to our project paarunga

Ungaluku endha idea...eppadi pannalam
nu thonuchunaalum sollungaa..will work
that way..!!

Idhu grp ahh engaging ahh vechikanum nu
start dhan pandren...let's keep working!!!
